

START WITH A PERFECT FINISH

A NEW AND IMPROVED ANODISING PROCESS

INEX **ULTRA** ANODISED™

THE LATEST INTERNATIONAL TREND IN SURFACE FINISHING

The brilliant new Inex anodising process provides a smoother, superior finish, relatively free of grain and with a more constant, low-reflective lustre and lower gloss level.

This exciting new German technology achieves a flatter etch than current anodising. It leaves a smoother surface than the bead-blasted product prevalent in the market, but offers a similar low level of gloss.

Which all adds up to a lot of advantages.

- Smoother surface means easier cleaning
- No restrictions on what can fit through the Blasting machine
- More consistent finish.
- More eco friendly than alternative similar processes.

INEX **ULTRA** ANODISED 20™

ADD AN EXTRA SUPER SEAL TO THE DEAL

A New Zealand first for Inex!

Inex Ultra Anodised 20 'Super Seal' carries a 20 year warranty on 25um anodising and 12um anodising carries a 10 year warranty!*

This incredible european seal technology has been developed to further enhance long-term corrosion protection by offering more resistance to most chemicals and more importantly, mortar.

'Super Seal' is an optional additional process to our current seal process.

End uses include architectural extrusions

- windows
- furniture
- louvres
- security grilles
- showers
- kitchen joinery
- internal partitions
- skirtings
- wardrobes
- balustrades
- signage
- lighting
- flashings
- cladding
- appliances, fittings and fixtures...

Inex Ultra Anodised and **Inex Ultra Anodised 20** can be used anywhere aluminium needs to be protected from the elements or simply needs to look great.

**This process is Job specific subject to WANZ location criteria as per NZS3604, and must be applied for before Anodising commences.*
